AB	<p><u>Epoxy compds. (100 parts) consisting of .gtoreq.65 wt.% liq. epoxy with low viscosity and .ltoreq.35 wt.% reactive diluents with 1-3 ep groups are mixed with 1-30 parts expandable microcapsules with av. c (in the unexpanded state) .ltoreq.100 .mu.m and with curing agents t</u> <u>-ve the title compns., which may also contain 5-50 parts filler and are useful, e.g., for auto parts. The microcapsules have walls of acrylonitrile-vinylidene chloride copolymer or acrylonitrile-Me acry copolymer (I) and are filled with low-b.p. compds. [Thus, 80 parts bisphenol A-based epoxy resin (viscosity 13,000 cP, epoxy equiv. wt. 20 parts 1,6-hexanediol diglycidyl ether, 5 parts microcapsules (av. -m. 15 .mu.m, with I enclosing isobutane), and 0.5 part other additives mixed at 40.degree. and 10 kg/cm2; the mixt. obtained (106 parts) wa cured with 24 parts modified alicyclic polyamine (viscosity 30 cP, a H equiv. wt. 42) at 150.degree. for 5 min and injection-molded to gi products with flexural strength 20.0 kg/cm2, flexural modulus 710 kg and smoothness .+- .5.0 .mu.m.</u></p>
